

## TRITON CONTROLS LTD.

### AMPLIFIER MODULE DSAC-AMP1

#### SWITCH TO GROUND INPUT NO/NC OUTPUT @ 6A 250V AC OPERATES ON 24V DC

This amplifier module gives a higher current output from a given input signal. The input is derived from a 24V supply, which is shorted to 0V via the coil of the internal relay and switches the output. When the input is removed the output is released.

The output is a relay with NO/NC connections giving a volt free output available to drive up to 6A @ 240V AC.
